Sl.No. 1

Water Manometer

SECTION-II: Detailed Technical Specifications of the Items

Manometer measure a pressure difference by balancing the weight of a fluid column between the two pressures of interest. Large pressure differences are measured with heavy fluids, such as mercury (e.g. 760 mm Hg – 1 atmosphere). Small pressure differences, such as those experienced in experimental wind tunnels or venture flow meters, are measured by lighter fluids such as water (27.7 inch = 1psi; 1 cm H₂O = 98.1 Pa). Calculate the pressure indicated by the manometer.
